

Claude / Anthropic API — see the `claude-api` skill

*This is a **pointer**, not a primer. The other kb-* files cross-link `[[kb-CLaude-api]]` when they touch the concrete API surface (model ids, pricing, message params, streaming format, tool-use blocks, MCP, prompt caching, token counting, model migration).*

For anything concrete about the Claude/Anthropic API, invoke the `claude-api` skill (via the Skill tool) — it is the authoritative, version-current reference and is maintained by Anthropic. Do NOT answer Claude-API specifics from memory; the skill exists precisely because model ids/pricing/params drift.

Conceptual context lives in the primers:

- The tool-use protocol, `stop_reason` / `tool_use` / `end_turn` , the agent loop, roles, MCP-as-standard → `[[kb-agent-loop]]`.
- SSE streaming format and consuming a token stream → `[[kb-streaming-pipeline]]`.
- Embeddings / vector search (the API's embedding side) → `[[kb-rag-retrieval]]`.

Current-model quick facts (verify against the skill before relying on them): the newest Claude models as of 2026 are the **Claude 5 family**, **Opus 4.8**, and **Haiku 4.5**. Model ids — Fable 5: `claude-fable-5` , Opus 4.8: `claude-opus-4-8` , Sonnet 5: `claude-sonnet-5` , Haiku 4.5: `claude-haiku-4-5-20251001` . When building AI apps, default to the latest, most capable model for the task.
